Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system;

submitting a prescription request to the prescription processing system;

capturing the prescription request for subsequent manipulation;

converting the captured prescription request to a digitized format at the

prescription processing system to obtain a digitized prescription request;

storing the digitized prescription request on a database maintained by the
prescription processing system;

independently assessing by personnel associated with the prescription processing system correctness of the prescription request, said personnel comprising a non-physician user electronically signing a patient's orders resulting form from said independently assessing;

preparing by said personnel a completed prescription form based on the submitted prescription request;

sending the completed prescription form to a filling pharmacy; and

filling the prescription request, at the filling pharmacy, based on the completed prescription form.

Application No.: 10/055,968
Docket: 103864.129 US1

2. (Original) The method of claim 1, wherein the prescription request is submitted in audible form.
3. (Original) The method of claim 1, wherein the prescription request is submitted by facsimile.
4. (Original) The method of claim 1, wherein the prescription request is submitted by electronic mail.
5. (Original) The method of claim 1, wherein the prescription request is submitted in the form of data from a wireless/mobile device.
6. (Original) The method of claim 1, wherein the prescription request is submitted in the form of data transmitted from a PDA.
7. (Currently Amended) The method of claim 1, further comprising the steps:
~~capturing the prescription request for subsequent manipulation; and~~
step of transcribing the captured prescription request.
8. (Original) The method of claim 7, wherein the step of preparing is performed based, at least partially, on a content of the transcribed prescription request.
9. (Cancelled)
10. (Original) The method of claim 9, wherein the digitized format is a digital data format.
11. (Original) The method of claim 9, wherein the digitized format is a standard digital audio format.

Application No.: 10/055,968
Docket: 103864.129 US1

12. (Original) The method of claim 9, further comprising the steps:
 creating an identification file, including identification data, for the digitized prescription request; and
 concatenating the identification file with the digitized prescription request to form a prescription file.
13. (Original) The method of claim 1, further comprising a step of prompting a user to input information associated with the prescription.
14. (Original) The method of claim 13, wherein the step of prompting comprises the steps:
 requesting physician information;
 requesting user information; and
 requesting a member ID number.
15. (Original) The method of claim 1, wherein the step of submitting includes a step of determining if the prescription request is to renew an existing prescription or to submit a new prescription.
16. (Original) The method of claim 15, wherein the prescription request is to submit a new prescription, and further comprising the steps:
 submitting member information;
 submitting patient information; and
 submitting medication information.

Application No.: 10/055,968
Docket: 103864.129 US1

17. (Original) The method of claim 16, wherein the member information includes the member's name and the member's address.

18. (Previously Presented) The method of claim 15, wherein the prescription request is to renew a prescription and further comprising the steps:

determining if there is an existing unique prescription number for renewal; and
requesting the existing unique prescription number if it is available.

19. (Currently Amended) The method of claim 18, further comprising the steps:

determining if there is a change ~~inpatient~~ in patient therapy that would affect one or more aspects of the prescription request; and

if there is no change inpatient therapy, then performing the steps:

reviewing the submitted prescription request to obtain the user's approval,
and

closing the prescription request.

20. (Original) The method of claim 19, wherein the user does not approve the submitted prescription request based on the step of reviewing, and further comprising a step of canceling the prescription request.

21. (Original) The method of claim 19, wherein there is a change in therapy, and further comprising the steps:

requesting new medication information from the user; and
reviewing the new medication information.

Application No.: 10/055,968
Docket: 103864.129 US1

22. (Original) The method of claim 18, wherein there is no prescription number for renewal, and further comprising the steps:

requesting member information;
requesting patient information; and
requesting medication information.

23. (Original) The method of claim 22, wherein the member information requested about the member includes the member's name and the member's address.

24. (Original) The method of claim 1, further comprising a step of closing the prescription request.

25. (Currently Amended) The method of claim 24, wherein the step of closing comprises the steps:

determining if the user would like to submit a new prescription request;
repeating the steps of submitting, preparing, sending, and filling if the user would like to submit a new prescription request; and
terminating the connection if the user would not like to submit ~~an~~ a new prescription request.

26. (Original) The method of claim 13, further comprising a step of verifying the prompted information input by the user.

27. (Previously Presented) The method of claim 26, further comprising the steps:
printing a form pre-populated with the verified information;

Application No.: 10/055,968
Docket: 103864.129 US1

assigning the form a unique identifier which associates the form with the prescription request; and

submitting the pre-populated form to the user via facsimile.

28. (Previously Presented) The method of claim 14, further comprising the steps:

comparing, at the prescription processing system, a physician's phone number and a prescription number; and

if the physician's phone number and the prescription number result in a predetermined relationship, wherein the predetermined relationship is a match between the physician's phone number and the prescription number and a stored physician's phone number and a stored prescription number stored at the prescription processing system then filling the prescription request using an automated entry agent associated with the prescription processing system.

29. (Previously Presented) The method of claim 1, wherein the step of establishing includes a step of establishing the connection using a telephone and wherein the step of submitting includes communicating with the prescription processing system using a touch tone telephone keypad.

30. (Original) The method of claim 1, wherein the step of connecting includes a step of establishing the connection over an electronic network using a personal computer.

31. (Original) The method of claim 30, wherein the electronic network is a direct-connection network.

32. (Original) The method of claim 30, wherein the electronic network is a packet-switched network.

Application No.: 10/055,968
Docket: 103864.129 US1

33. (Original) The method of claim 30, wherein:
- the prescription request is an audible prescription request; and
 - the step of submitting includes a step of submitting the audible prescription request through a microphone coupled to the personal computer.
34. (Original) The method of claim 1, wherein the step of submitting a prescription request includes the steps:
- submitting patient information; and
 - submitting medication information.
35. (Original) The method of claim 34, wherein the submitted patient information includes a patient name, address, and date of birth.
36. (Original) The method of claim 34, wherein the submitted medication information includes medication name, strength, and dosage.
37. (Currently Amended) A method of processing prescription requests comprising the steps:
- establishing a connection to a remotely located prescription processing system;
 - submitting a prescription request to the prescription processing system;
 - capturing the prescription request for subsequent manipulation;
 - processing the captured prescription request;
 - independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request, said personnel comprising a non-physician user electronically signing a patient's orders resulting ~~from~~ from said independently assessing;

Application No.: 10/055,968
Docket: 103864.129 US1

comparing, at the prescription processing system, a physician's phone number and a prescription number;

preparing, by said at least one of a pharmacist and personnel a completed prescription form based, at least partially, on the processed prescription request;

sending the completed prescription form to a predetermined pharmacy; and

if the physician's phone number and the prescription number result in a predetermined relationship, wherein the predetermined relationship is a match between the physician's phone number and the prescription number and a stored physician's phone number and a stored prescription number stored at the prescription processing system then filling the prescription request, at the predetermined pharmacy, based on the completed prescription form.

38. (Currently Amended) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system;

submitting a prescription request to the prescription processing system;

capturing the prescription request;

converting the captured prescription request to a digitized format to obtain a digitized prescription request;

creating an identification file, including identification data, for the digitized prescription request;

associating the identification file and the digitized prescription request to form a prescription file;

storing the prescription file on a database maintained by the prescription processing system;

Application No.: 10/055,968
Docket: 103864.129 US1

transcribing the digitized prescription request;
independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request, said personnel comprising a non-physician user electronically signing a patient's orders resulting ~~from~~ from said independently assessing;
preparing, by said at least one of a pharmacist and personnel a completed prescription form based, at least partially, on the processed prescription request;
sending the completed prescription form to a filling pharmacy; and
filling the prescription request, at the filling pharmacy, based at least partially on the completed prescription form.

39. (Currently Amended) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system;
submitting a prescription request to the prescription processing system;
capturing the prescription request;
converting the captured prescription request to a digitized format to obtain a digitized prescription request;
creating an identification file, including identification data, for the digitized prescription request;
associating the identification file and the digitized prescription request to form a prescription file;
storing the prescription file on a database maintained by the prescription processing system;

Application No.: 10/055,968
Docket: 103864.129 US1

transcribing the captured prescription request;
independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request;
preparing, by said at least one of a pharmacist and personnel a completed prescription form based, at least partially, on the processed prescription request;
sending the completed prescription form to a pharmacy;
filling the prescription request, at the pharmacy, based on the completed prescription form;
determining if the user would like to submit a new prescription request;
repeating the steps of submitting, capturing, transcribing, preparing, sending, filling, and determining if the user would like to submit a new prescription request; and
terminating the connection if the user would not like to submit a new prescription request.

40. (Previously Presented) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system;
submitting a prescription request to the prescription processing system, wherein the prescription request includes user information and a member ID number;
capturing the prescription request;
converting the captured prescription request to a digitized format to obtain a digitized prescription request;
creating an identification file, including identification data, for the digitized prescription request;

Application No.: 10/055,968
Docket: 103864.129 US1

associating the identification file with the digitized prescription request to form a prescription file;

storing the prescription file on a database maintained by the prescription processing system;

transcribing the digitized prescription request;

independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request;

preparing, by said at least one of a pharmacist and personnel a completed prescription form based, at least partially, on the processed prescription request;

sending the completed prescription form to a central pharmacy; and

filling the prescription request, at the central pharmacy, based at least partially on the completed prescription form.

41. (Currently Amended) A method of submitting a prescription request for retrieval of a filled prescription by a patient, the method comprising the steps:

initiating a connection to a remotely located prescription processing system;

submitting an audible prescription request to the prescription processing system;

capturing the prescription request;

converting the captured prescription request to a digitized format to obtain a digitized prescription request;

creating an identification file, including identification data, for the digitized prescription request;

Application No.: 10/055,968
Docket: 103864.129 US1

associating the identification file and the digitized prescription request to form a prescription file;

storing the prescription file on a database maintained by the prescription processing system;

filling the prescription request, at a filling pharmacy responsive to receipt of the prescription request from the remotely located prescription processing system; and

retrieving, by the patient, a filled prescription from a predetermined filling pharmacy remotely located from the prescription processing system.

42. (Currently Amended) A method of processing a submitted prescription request, comprising the steps:

receiving a request from a remote source to establish a connection with a local prescription processing system;

establishing a connection with the remote source;

receiving an audible prescription request;

preparing, by a pharmacist, a completed prescription form based, at least partially, on the audible prescription request; and

sending the completed prescription form to a pharmacy to be filled; and

if the physician's phone number and the prescription number result in a predetermined relationship, wherein the predetermined relationship is a match between the physician's phone number and the prescription number and a stored physician's phone number and a stored prescription number stored at the prescription processing system then filling the prescription request, at the predetermined pharmacy, based on the completed prescription form.

Application No.: 10/055,968
Docket: 103864.129 US1

43. (Currently Amended) A prescription processing network comprising:

a prescription processing system;

a communication device for establishing a communication channel with said prescription processing system and submitting a prescription request over said communication channel, said communication device being remotely located from said prescription processing system;

said prescription processing system being accessible by one of a pharmacist and personnel capable of independently assessing correctness of the prescription request for preparing a completed prescription form based, at least in part, on the submitted prescription request, and said prescription processing system includes a header entry agent for retrieving general information from a digitized prescription request, wherein said submitted prescription is digitized into said digitized prescription request, and transcribing said general information, wherein said general information comprises non-medication related information comprising at least one of member's name, member's identification number, physician information, and patient information; and

a pharmacy for receiving said completed prescription form, and filling said prescription request based on the completed prescription form.

44. (Original) The prescription processing network of claim 43, wherein said communication device includes circuitry for submitting said prescription request electronically.

45. (Original) The prescription processing network of claim 43, wherein said communication device includes circuitry for submitting said prescription request in an audible format.

Application No.: 10/055,968
Docket: 103864.129 US1

46. (Cancelled)

47. (Original) The prescription processing network of claim 43, wherein said communication channel is established over a private network.

48. (Original) The prescription processing network of claim 43, wherein said communication channel is established over a public network.

49. (Original) The prescription processing network of claim 48, wherein said public network is the Internet.

50. (Original) The prescription processing network of claim 43, wherein said communication device is a computer.

51. (Original) The prescription processing network of claim 43, wherein said communication device is a telephone.

52. (Original) The prescription processing network of claim 43, wherein said communication device is a facsimile device.

53. (Original) The prescription processing network of claim 43, wherein said pharmacist and said pharmacy are remotely located from each other, and remotely located from both said prescription processing system and said communication device.

54. (Previously Presented) The method of claim 1, wherein the prescription request is submitted telephonically.

55. (Previously Presented) The method of claim 1, wherein the prescription request is submitted using computerized voice entry techniques.

Application No.: 10/055,968
Docket: 103864.129 US1

56. (Currently Amended) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system using a telephone;

submitting an audible prescription request to the prescription processing system using said telephone;

retrieving general information using a header entry agent from a digitized prescription request;

digitizing said submitted prescription into said digitized prescription request;

transcribing said general information comprising non-medication related information including at least one of member's name, member's identification number, physician information, and patient information

independently assessing by personnel associated with the prescription processing system correctness of the prescription request;

preparing by said personnel a completed prescription form based on the submitted prescription request;

sending the completed prescription form to a filling pharmacy; and

filling the prescription request, at the filling pharmacy, based on the completed prescription form.

57. (Currently Amended) A method of processing prescription requests comprising the steps:

Application No.: 10/055,968
Docket: 103864.129 US1

establishing a connection to a remotely located prescription processing system using a telephone;

submitting an audible prescription request to the prescription processing system using said telephone;

capturing the prescription request for subsequent manipulation;

processing the captured prescription request;

converting the captured prescription request to a digitized format to obtain a digitized prescription request;

creating an identification file, including identification data, for the digitized prescription request;

associating the identification file and the digitized prescription request to form a prescription file;

storing the prescription file on a database maintained by the prescription processing system;

independently assessing by personnel associated with the prescription processing system correctness of the prescription request;

preparing by said personnel a completed prescription form based on the submitted prescription request;

sending the completed prescription form to a predetermined pharmacy; and

filling the prescription request, at the predetermined pharmacy, based on the completed prescription form responsive to receipt of the prescription request from the remotely located prescription processing system.

Application No.: 10/055,968
Docket: 103864,129 US1

58. (Previously Presented) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system using a telephone;

submitting an audible prescription request to the prescription processing system using said telephone;

capturing the prescription request;

converting the captured prescription request to a digitized format to obtain a digitized prescription request;

creating an identification file, including identification data, for the digitized prescription request;

associating the identification file and the digitized prescription request to form a prescription file;

storing the prescription file on a database maintained by the prescription processing system;

transcribing the digitized prescription request;

independently assessing by personnel associated with the prescription processing system correctness of the prescription request;

preparing by said personnel a completed prescription form based on the submitted prescription request;

sending the completed prescription form to a filling pharmacy; and

filling the prescription request, at the filling pharmacy, based at least partially on the completed prescription form.

Application No.: 10/055,968

Docket: 103864.129 US1

59. (Currently Amended) A method of processing prescription requests comprising the steps:
- establishing a connection to a remotely located prescription processing system using a telephone;
 - submitting an audible prescription request to the prescription processing system using said telephone;
 - capturing the prescription request;
 - transcribing the captured prescription request;
 - converting the captured prescription request to a digitized format to obtain a digitized prescription request;
 - creating an identification file, including identification data, for the digitized prescription request;
 - associating the identification file and the digitized prescription request to form a prescription file;
 - storing the prescription file on a database maintained by the prescription processing system;
 - independently assessing by personnel associated with the prescription processing system correctness of the prescription request;
 - preparing by said personnel a completed prescription form based on the submitted prescription request;
 - sending the completed prescription form to a pharmacy;
 - filling the prescription request, at the pharmacy, based on the completed prescription form;

Application No.: 10/055,968
Docket: 103864.129 USI

determining if the user would like to submit a new prescription request;
repeating the steps of submitting, capturing, transcribing, preparing, sending,
filling, and determining if the user would like to submit a new prescription request; and
terminating the connection if the user would not like to submit a new prescription
request.

60. (Previously Presented) A method of processing prescription requests comprising the
steps:

establishing a connection to a remotely located prescription processing system
using a telephone;

submitting an audible prescription request to the prescription processing system
using said telephone, wherein the audible prescription request includes user information and a
member ID number;

capturing the prescription request;

converting the captured prescription request to a digitized format to obtain a
digitized prescription request;

creating an identification file, including identification data, for the digitized
prescription request;

associating the identification file with the digitized prescription request to form a
prescription file;

storing the prescription file on a database maintained by the prescription
processing system;

transcribing the digitized prescription request;

Application No.: 10/055,968
Docket: 103864.129 US1

independently assessing by personnel associated with the prescription processing system correctness of the prescription request;

preparing by said personnel a completed prescription form based on the submitted prescription request;

sending the completed prescription form to a central pharmacy; and

filling the prescription request, at the central pharmacy, based at least partially on the completed prescription form.

61. (Currently Amended) A method of submitting a prescription request for retrieval of a filled prescription by a patient, the method comprising the steps:

initiating a connection to a remotely located prescription processing system using a telephone;

submitting an audible prescription request to the prescription processing system using said telephone;

capturing the audible prescription request;

converting the captured prescription request to a digitized format to obtain a digitized prescription request;

creating an identification file, including identification data, for the digitized prescription request;

associating the identification file and the digitized prescription request to form a prescription file;

storing the prescription file on a database maintained by the prescription processing system;

Application No.: 10/055,968
Docket: 103864.129 US1

filling the prescription request, at a filling pharmacy responsive to receipt of the prescription request from the remotely located prescription processing system; and
retrieving, by the patient, a filled prescription from a predetermined filling pharmacy remotely located from the prescription processing system.

62. (Currently Amended) A method of processing a submitted prescription request, comprising the steps:

receiving a request from a remote source to establish a connection with a local prescription processing system;

establishing a connection with the remote source using a telephone;

receiving an audible prescription request by way of said telephone;

capturing the audible prescription request;

converting the captured prescription request to a digitized format to obtain a digitized prescription request;

creating an identification file, including identification data, for the digitized prescription request;

associating the identification file and the digitized prescription request to form a prescription file;

storing the prescription file on a database maintained by the prescription processing system;

preparing, by a pharmacist, a completed prescription form based, at least partially, on the audible prescription request from the remotely located prescription processing system; and
sending the completed prescription form to a pharmacy to be filled.

Application No.: 10/055,968
Docket: 103864.129 US1

63. (Previously Presented) The prescription processing network of claim 43, wherein said communication device includes circuitry for submitting said prescription request in an audible format using a telephone.
64. (Previously Presented) A method of processing prescription requests comprising the steps:
- establishing a connection to a remotely located prescription processing system;
 - submitting a prescription request to the prescription processing system;
 - capturing the prescription request;
 - converting the captured prescription request to a digitized format to obtain a digitized prescription request;
 - creating an identification file, including identification data, for the digitized prescription request;
 - associating the identification file and the digitized prescription request to form a prescription file;
 - storing the prescription file on a database maintained by the prescription processing system;
 - transcribing the digitized prescription request;
 - independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request;

Application No.: 10/055,968
Docket: 103864.129 US1

preparing, by said at least one of a pharmacist and personnel a completed prescription form based, at least partially, on the processed prescription request;
sending the completed prescription form to a filling pharmacy; and
filling the prescription request, at the filling pharmacy, based at least partially on the completed prescription form,

wherein said at least one of said pharmacist and said personnel and said filling pharmacy are remotely located from each other, and remotely located from said prescription processing system.

65. (Previously Presented) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system;
submitting a prescription request to the prescription processing system, wherein the prescription request includes user information and a member ID number;
capturing the prescription request;
converting the captured prescription request to a digitized format to obtain a digitized prescription request;
creating an identification file, including identification data, for the digitized prescription request;
associating the identification file with the digitized prescription request to form a prescription file;
storing the prescription file on a database maintained by the prescription processing system;

Application No.: 10/055,968
Docket: 103864.129 US1

transcribing the digitized prescription request;

independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request, the at least one of the pharmacist and personnel and the prescription processing system being separate from at least one of a hospital and a physician where the prescription request was originated, and the at least one of the pharmacist and personnel and the prescription processing system being separate from a central pharmacy where the prescription request is to be fulfilled;

preparing, by said at least one of a pharmacist and personnel a completed prescription form based, at least partially, on the processed prescription request;

sending the completed prescription form to the central pharmacy; and

filling the prescription request, at the central pharmacy, based at least partially on the completed prescription form

wherein said at least one of said pharmacist and said personnel and said central pharmacy are remotely located from each other, and remotely located from said prescription processing system.

66. (Previously Presented) The method of claim 28, wherein, if the physician's phone number and the prescription number fails to result in a predetermined relationship, the method further comprises contacting a user to indicate the failure and to determine whether the prescription request is authentic.

67. (Previously Presented) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system;

submitting a prescription request to the prescription processing system;

Application No.: 10/055,968
Docket: 103864.129 US1

capturing the prescription request for subsequent manipulation;
transcribing the captured prescription request;
converting the captured prescription request to a digitized format at the
prescription processing system to obtain a digitized prescription request;
storing the digitized prescription request on a database maintained by the
prescription processing system;
creating an identification file, including identification data, for the digitized
prescription request;
concatenating the identification file with the digitized prescription request to form
a prescription file;
independently assessing by at least one of a pharmacist and personnel associated
with the prescription processing system correctness of the prescription request, the at least one of
the pharmacist and personnel and the prescription processing system being separate from at least
one of a hospital and a physician where the prescription request was originated, and the at least
one of the pharmacist and personnel and the prescription processing system being separate from
a pharmacy where the prescription request is to be fulfilled;
preparing by said at least one of a pharmacist and personnel a completed
prescription form based on the submitted prescription request;
comparing, at the prescription processing system, a physician's phone number and
a prescription number;
if the physician's phone number and the prescription number result in a
predetermined relationship, wherein the predetermined relationship is a match between the
physician's phone number and the prescription number and a stored physician's phone number

Application No.: 10/055,968
Docket: 103864.129 US1

and a stored prescription number stored at the prescription processing system then filling the prescription request using an automated entry agent associated with the prescription processing system.

68. (Previously Presented) A method of processing prescription requests comprising the steps:

- establishing a connection to a remotely located prescription processing system;
- submitting a prescription request to the prescription processing system, wherein the prescription request is submitted by facsimile;
- capturing the prescription request for subsequent manipulation;
- transcribing the captured prescription request;
- converting the captured prescription request to a digitized format at the prescription processing system to obtain a digitized prescription request;
- storing the digitized prescription request on a database maintained by the prescription processing system
- creating an identification file, including identification data, for the digitized prescription request;
- concatenating the identification file with the digitized prescription request to form a prescription file;
- independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request, the at least one of the pharmacist and personnel and the prescription processing system being separate from at least one of a hospital and a physician where the prescription request was originated, and the at least

Application No.: 10/055,968
Docket: 103864.129 US1

one of the pharmacist and personnel and the prescription processing system being separate from a pharmacy where the prescription request is to be fulfilled;

preparing by said at least one of a pharmacist and personnel a completed prescription form based on the submitted prescription request;

comparing, at the prescription processing system, a physician's phone number and a prescription number;

if the physician's phone number and the prescription number result in a predetermined relationship, wherein the predetermined relationship is a match between the physician's phone number and the prescription number and a stored physician's phone number and a stored prescription number stored at the prescription processing system then filling the prescription request using an automated entry agent associated with the prescription processing system.

69. (Previously Presented) A method of processing prescription requests comprising the steps:

establishing a connection to a remotely located prescription processing system, wherein the step of establishing includes a step of establishing the connection using a telephone;

submitting a prescription request to the prescription processing system, wherein the step of submitting includes communicating with the prescription processing system using a touch tone telephone keypad;

capturing the prescription request for subsequent manipulation;

transcribing the captured prescription request;

converting the captured prescription request to a digitized format at the prescription processing system to obtain a digitized prescription request;

Application No.: 10/055,968
Docket: 103864.129 US1

storing the digitized prescription request on a database maintained by the prescription processing system;

creating an identification file, including identification data, for the digitized prescription request;

concatenating the identification file with the digitized prescription request to form a prescription file;

independently assessing by at least one of a pharmacist and personnel associated with the prescription processing system correctness of the prescription request, the at least one of the pharmacist and personnel and the prescription processing system being separate from at least one of a hospital and a physician where the prescription request was originated, and the at least one of the pharmacist and personnel and the prescription processing system being separate from a pharmacy where the prescription request is to be fulfilled;

preparing by said at least one of a pharmacist and personnel a completed prescription form based on the submitted prescription request;

comparing, at the prescription processing system, a physician's phone number and a prescription number; and

if the physician's phone number and the prescription number result in a predetermined relationship, wherein the predetermined relationship is a match between the physician's phone number and the prescription number and a stored physician's phone number and a stored prescription number stored at the prescription processing system then filling the prescription request using an automated entry agent associated with the prescription processing system.

Application No.: 10/055,968
Docket: 103864.129 US1

70. (Currently Amended) A prescription processing system comprising:
a telephone for receiving an audible prescription request;
a computer for capturing the audible prescription request and for receiving a digitized prescription request, the computer creating an identification file, including identification data, for the at least one of the digitized prescription request and the audible prescription request and associating the identification file and the at least one of the digitized prescription request and the audible prescription request to form a prescription file;
a header entry agent for retrieving general information from at least one of the digitized prescription request and the audible prescription request after the audible prescription request has been converted to a digitized format at the prescription processing system, and the general information is transcribed, and wherein said general information comprises non-medication related information comprising at least one of member's name, member's identification number, physician information, and patient information;
a database for storing at least one of the digitized prescription request and the audible prescription request after the audible prescription request has been converted to a digitized format at the prescription processing system; and
a user interface enabling personnel associated with the prescription processing system to independently assesses correctness of at least one of the digitized prescription request and the audible prescription request and prepares a completed prescription form based on the at least one of the digitized prescription request and the audible prescription request; and
a pharmacy for receiving said completed prescription form, and filling said prescription request based on the completed prescription form, and if the physician's phone number and the prescription number result in a predetermined relationship, wherein the predetermined
